

IRRIGATION & LANDSCAPE LIGHTING

University Sprinkler Systems Incorporated is the largest installer of residential & commercial irrigation systems in British Columbia. Whether you are a commercial contractor, a residential builder, a home owner, or a commercial property management company, University Sprinklers has the expertise, service, and equipment to deliver quality irrigation systems and landscape lighting installations — on time, on budget, and year-round.

We are locally owned and operated, and have clients from Hope to Squamish and up the Sunshine Coast, with mobile staff in every municipality we service!

MORE THAN JUST LAWN SPRINKLERS

IRRIGATION SYSTEM INSTALLATION

Irrigation systems are one of the best investments you can make in your home. Over the past three decades we have installed more residential irrigation systems than any other installer in BC — making us experts in our field, and experts at your project.

IRRIGATION SYSTEM SERVICING

We cover everything from regular spring and fall maintenance to irrigation expansion, winterization, and water-wise retrofits. We also maintain a custom-designed database that contains important information about your property, making servicing quicker and more efficient.

CERTIFIED IRRIGATION DESIGN

Our Certified Irrigation Designers have the technical expertise and an up-to-date understanding of the latest water management practices to design, install, manage and maintain a wide variety of irrigation systems in both commercial and residential installations.

WATER WISE IRRIGATION

There are easy ways to save water, without sacrificing your garden. You can help protect the environment simply by selecting the right components for your irrigation system. Drip irrigation, rain sensors, water-saving heads and wifi controllers are just a few of the products we can recommend to lessen your “water footprint”.

LANDSCAPE LIGHTING

Light Up Your Nights with Landscape Lighting. Make your garden or balcony a beautiful outdoor canvas during the night with a professionally installed outdoor lighting system. Nothing adds drama to your evenings like landscape lighting.

RAINWATER HARVESTING

Our rainwater harvesting experts can design an affordable rainwater harvesting system that saves water and essentially grants you immunity to watering restrictions. Collection systems range from 10,000-gallon cisterns to 40-gallon rain barrels. We are innovators in this rapidly growing field.

IRRIGATION CERTIFICATIONS

University Sprinklers is a member of the Irrigation Industry Association of B.C. and has numerous accreditations from both the IIABC and the Irrigation Association (USA). We are an IIABC Certified Irrigation Contractor (Commercial & Residential), and an accredited IA Certified Contractor. Our staff members are highly trained, and their credentials show it. We have on staff Certified Commercial Irrigation Designers, Certified Residential Irrigation Designers, and Certified Irrigation Schedulers.

We have more Certified Irrigation Technicians on staff than any other company anywhere in Canada.

Continuous training through the IIABC is a key aspect of our success. Besides the numerous IIABC and IA accreditations, staff members also hold Certified Cross Connection Control tickets and Class RC Low Voltage Electrical tickets – we are a Bonded and Licensed Electrical Contractor.

University Sprinklers is a Rain Bird Select Contractor – a designation held only by the elite within the Irrigation Industry. Rain Bird is the oldest and largest manufacturer of irrigation products. As a Select Contractor we help test cutting edge water-saving products that lead to reduced water consumption, and have a keen understanding of the responsibilities therein.

Our commitment to the environment is also underscored by our leadership in water conservation. We are members of CANARM, the Canadian Association for Rainwater Management, and hold Accredited Rainwater Harvester distinction from the American Rainwater Catchment Systems Association. Additionally, our VP David Pfortmueller is a member of the Environmental Protection Agency's WaterSense Program.
