

RESIDENTIAL & COMMERCIAL IRRIGATION SERVICING

Why Choose University Sprinklers

From the moment you call, to the time the repair is completed, our service personnel are trained to relate to customers in a courteous, expeditious, and fair manner. We maintain a custom-designed database that contains important information about your property, making servicing quicker and more efficient. With the largest service fleet in the industry, University Sprinklers is able to service your system fast.

SPRING START-UP

Spring Start-up service makes your system ready for the coming season. We re-charge the system's mainlines, check all heads, re-program timers, and test all zones. This is an optional service that University Sprinklers provides that many customers appreciate so that their system is ready when the hot weather arrives.

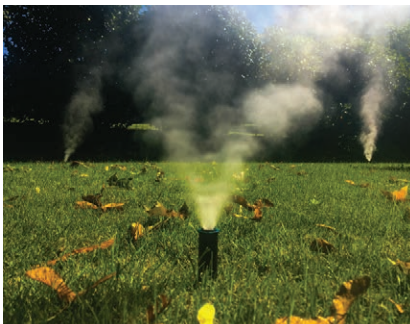

FALL WINTERIZATION

Fall Winterization is a strongly recommended service that ensures your system is protected against costly freeze damage during the winter. This service is usually completed by November 15th of each year.

IRRIGATION REPAIR

Does your lawn have brown spots? If it does it might be a sign your irrigation system needs repairs. We carry advanced wire tracing and detecting equipment to find lost valves, repair broken subsurface wires, and trace mainlines.

We also have sophisticated equipment that gives us the ability to replace broken lines under driveways, sidewalks, and parking areas in most cases. With factory trained service personnel, warranty related or non-warranty related problems can be fixed quickly and professionally.

IRRIGATION UPGRADES

If you are considering changing your landscape, it is important to consider changes to your irrigation system. Sometimes relocating trees or shrubs will require changing or moving sprinkler heads to more effectively water your new landscape. In addition, if you have had your irrigation system for a number of years you may want to consider a “tune-up”. As your landscape grows heads may need adjusting or moving to ensure your entire yard is effectively watered.

Additionally, our trucks are equipped with landscape lighting equipment, so if your landscape lighting system needs work, we can do that at the same time!

WATER SAVING UPGRADES

Many clients today are increasingly concerned about water conservation. There are a number of ways you can save water, without sacrificing your garden. Product selection can have a significant impact on how much water your irrigation system uses. Rain sensor components monitor rainfall levels and automatically turn off your irrigation when there has been enough rain. Wifi controllers let you operate your sprinkler system over the internet. Careful selection of water-saving heads and nozzles can result in thousands of gallons per year in water savings. For homes that are metered, this can add up to hundreds of dollars per year. Drip irrigation and micro irrigation can be very efficient in the right application, and rainwater harvesting is also something home and business owners are investing in more and more. Ask us for our Water Wise Irrigation brochure, or visit our website for more details.

COMMITMENT TO EXCELLENCE

Our Commitment to Excellence Program assures you get quality products and workmanship, delivered on time and on budget, to our clear specifications for reliability and durability. Whether you are installing an irrigation system, or landscape lighting, our program consists of careful planning, product selection, installation, service, and warranty.

SERVICE

Our service to you will include:

- written estimates and your prior approval for all work to be performed
- prompt replies to all messages or enquiries
- a full maintenance program, if requested, to include an annual winterization service to protect your system from freezing damage.

WARRANTY

All of our irrigation systems are backed by a one (1) year warranty covering labour and a two (2) year warranty covering parts. Our head office can be contacted year-round.
